Is IRIS has an option to replace the qualified name into sql by a synonym?

In Oracle database, the synonym is an alternative name for objects such as tables, views, sequences, stored procedures, and other database objects.

You generally use synonyms when you are granting access to an object from another schema and you don't want the users to have to worry about knowing which schema owns the object.

Is IRIS SQL syntax has something like this: (oracle syntax)

```
CREATE PUBLIC SYNONYM suppliers  
FOR app.suppliers;
```

This first CREATE SYNONYM example demonstrates how to create a synonym called suppliers. Now, users of other schemas can reference the table called suppliers without having to prefix the table name with the schema named app. For example:

```
SELECT *  
FROM suppliers;
```
