aoc2020-objectscript-template Error: Invalid Community Edition license, may have exceeded core limit.

Good evening InterSystems Community,

I want to participate in the Advent of Code 2020 and followed the installation instructions in "The Advent of Code 2020 contest ObjectScript template"

(<https://openexchange.intersystems.com/package/aoc2020-objectscript-template>).

Unfortunately I get "Error: Invalid Community Edition license, may have exceeded core limit." at the step "docker-compose build".

```
Step 16/16 : RUN iris start IRIS      && iris session IRIS < /tmp/iris.script      && iris stop IRIS quietly
---> Running in c4edc2f113da
Using 'iris.cpf' configuration file

This copy of InterSystems IRIS has been licensed for use exclusively by:
Too many Cores (12) for InterSystems IRIS Community License.

Error: Invalid Community Edition license, may have exceeded core limit. - Shutting down the system : $zu(56,2)=

An error was detected during InterSystems IRIS startup.
** Startup aborted **
ERROR: Service 'iris' failed to build : The command '/bin/sh -c iris start IRIS      && iris session IRIS <
```

I think I already found a way to tell docker to use less cores (docker run --cpus 2), but I can't figure out how to integrate that into "docker-compose build".

I would really appreciate any advice, thanks!

Best regards,
Stefan Katzensteiner
