Atelier not available in web anymore?

Hi,

I'm moving my development to a new PC based on UBUNTU Linux now to be compatible with IRIS.

I found out, that the Atelier plugin for Eclipse is not available anymore on Eclipse Marketplace and https://atelier.jfrog.com/atelier/updates/stable/1.3.

And I was was wondering, that noone has commented this here until now and Intersystems is still mentioning the old sources in the document https://download.intersystems.com/download/atelier.csp

Fortunately I could copy my old Eclipse installation together with Atelier to the new machine. But this is not a solution for other partners coming newly to IRIS development.

What is the official Intersystems solution for this problem?

#Development Environment #Eclipse
Product version: IRIS 2020.4
