Developer Community Release, January 2021

Hi Developers!

This is a release of how did we improve the Developer Community in January 2021. The key features:

- Twitter account support
- New personal user profile page
- New user posts page
- New user replies page
- New user followers page
- New user following page

See the details below.

Twitter account support

Now you can add your Twitter account to your member profile. Go to your profile and click edit - there you will find an input field for a link to your Twitter account.

Additional Info

Title/Position

Company

Git/Web URL

Github profile

LinkedIn profile

Twitter profile

Open Exchange profile

New personal user profile page

With the new design, you can now see all the user's achievements on every user's page – User statistics block.

Add DC users to your favorites and subscribe to their activity, write Direct Messages in one click and see their pages on Open Exchange and other social networks.

All that means, you don't understand the key features of using Docker.
If you recreate your container from the image, you lose all those changes.

- apt-get should be run through Dockerfile
- If those files are system files, you have to edit them during docker build
- You can run and stop this container and kill it if you wish, is not powerful enough))
- What limits you? Application has to be limited in some ways, for many reasons, first of all by security reason. Any data should have it's own location on the filesystem, if your application have to have access to do anything with any file on server's filesystem, it is very dangerous application.

New user posts page

When viewing a user's posts, you can filter them by post type.

The screenshot shows a community post interface. At the top right, there is a button labeled "All posts" with a hamburger menu icon. Below it, a dropdown menu is open, listing categories: "All posts (2)" (checked), "Articles (1)", "Announcements (1)", "Questions (0)", "Discussions (0)", and "Digests (0)". The main post is by Alex Kanashevskiy, dated Dec 25, 2020, and is marked as an "Announcement". The title is "Developer Community Release, December 2020". The content starts with "Hi Developers!" followed by "This is a release of how did we improve the Developer Community in December 2020 features:". A bulleted list follows: "version product field for Question posts;", "\$ZV - exact product version for Question posts;", "new tag tree page;", and "SVG Support.". Below the list, it says "See the details below." and includes the hashtags "#Release" and "#Developer Community". At the bottom of the post, there are engagement metrics: 4 likes, 0 dislikes, 0 stars, 2 comments, 70 views, and a bar chart icon.

New user replies page

From the replies page, you can now navigate to the post page where the reply was written and also easily view the user's accepted answers.

The screenshot shows a user's profile page for "Evgeny Shvarov" dated Jan 27, 2021. At the top, there are two tabs: "All" and "Accepted answers". A red arrow points to the "Accepted answers" tab. Below the tabs, there is a single post. The post content is "You can get any template ready. e.g. [this one](#). Just clone it, open the folder in VSCode, run the docker container, and start coding.". To the right of the post, there is a red-bordered button labeled "go to post".

New user page of followers and following

And meet new features added when browsing your followers and following members. You can easily add them to your favorites, view their profile, or send them a message in one click.
