SQL Search/iFind to find out how many matches are there

I have an [SQL text index](#) defined like this

```
Index TextIndex On (Text) As %iFind.Index.Basic(IGNOREPUNCTUATION = 1, INDEXOPTION = 0, LANGUAGE = "en", LOWER = 1);
```

If I run a query like this:

```
SELECT  
Text  
FROM Post  
WHERE %ID %FIND search_index("TextIndex", 'ABC')
```

I get 20 results with posts containing the term ABC.

But each post can contain the term ABC several times.

Is there a way to get a total count of ABC term?

Is there a way to get a count of ABC term in each Post?
