How to make changes in SQL to view data in a field character which is more than 100 characters

Hi All,

In earlier cache version, I can see full data values in SQL management portal.

But IRIS restricted the view only to 100 chars.

"If the data in a field is longer than 100 characters, the first 100 characters of the data are displayed followed by an ellipsis (...) indicating additional data." - From Documentation.

Is there a way to change this behavior? I would like to see all the values in the particular SQL field.

Thanks in advance,

Archunan K
