Rule to evaluate if a value exists in a table

I have a operations that is writing 6 values to a table

Class BHS.Custom.MosaiqCloudPatientsTable Extends (%Persistent, Ens.Request) [Inheritance = right]

I need to create a routing rule to evaluate a field in an hl7 ORU message , see if it exists in the account column of the table. If it does then allow the message to pass.

This table is not a lookup table. How can I get a function to evaluate a field to this table?

#Business Rules #Ensemble
