How to post to Cache Rest-service as https

Hello to all,

I created a form in React and submitted the data to a cache-Rest service.
On the local network it works just fine.

But when i deploy it on our webserver in order to acces it from the outside it won't work anymore beacuse the external address is a https address, and the call to the cache webserver is based on http.(XXXXXXXXXX)

Resulting in the following error: Referrer Policy: strict-origin-when-cross-origin (Chrome)

How should i resolve this? How can I make this rest-service accessible for https?

Best regards,

Simon
