CI/CD Using GitHub and Travis CI - Source to Cache XML Format

Hi,

I am investigating creating builds from TravisCI, which will pull the source from github.
This will also involve a code review process, pull request, etc.

It will be done in Multiple phases. The first one will not involve automated testing using TravisCI yet. It will only involve travisCI pulling the latest code from github and creating a release for testing(A deployment file in a format that can be loaded by Ensemble0)

What I want to know is: Is there a way or tool available to take the source files and create an XML file which can be used for deployment to Ensemble?

Kind regards,
Stefan

[#Deployment](#) [#Tools](#) [#Ensemble](#)
Product version: Ensemble 2018.1
