Remember Password feature in ZEN Application

Hi Community,

is there a possibility to implement a "remember password" feature in a ZEN Application?

In the management portal I added a web-application for a ZEN application with password authentication. I created an own login page, and now I want to implement a "remember password" feature (User should not have to login again after the session times out or when the browser window is closed).

[#Authentication](#) [#CSP](#) [#ZEN](#) [#Caché](#)

Product version: Caché 2018.1
