JSON Web Token Authorisation and Bearer Tokens

Hi,

I am very much a newbie on the subject of JWT, so please except my ignorance.

The Trust I am currently working for wish to create a framework whereby they can create REST API Services, within HealthConnect, and grant access to these using JSON Web Token Authorisation and Bearer Tokens. This would be similar to the way the Trust currently connects to other REST API's, i.e.: DocMan Connect and GOV.UK Notify.

Can anyone offer any advice / sample code and / or point me into the direct of suitable documentation to achieve this?

Also, any advice on how to set-up and use OAuth and OpenID Connect would be very useful.

Thank you in advance.
