Countries and Titanic Datasets for Testing

Hi developers!

Sometimes we need to test this or that library, framework, or function vs some dataset. And often we want to deal with some meaningful data.

Recently I added two very simple but meaningful datasets that could be installed with one line.

Titanic Dataset

[Application](#)

Contains 800+ records about passengers from the famous cruise liner. The dataset could be installed with:

```
zpm "install dataset-titanic"
```

This installs one class dc.data.Titanic with 800+ records.

Countries dataset

[Application](#)

The dataset contains data about 167 countries such as population, surface, capital, the average life expectancy. The dataset could be installed as:

```
zpm "install dataset-countries"
```

This installs one class dc.data.Countries and the global with data.
