Adding Open Exchange shield to your Github repo

Hi folks!

Just a very short note on if you want to add a cute Open Exchange shield like this:

in your GitHub repo you can do it by entering one line like this:

```
[![Gitter](https://img.shields.io/badge/Available%20on-Intersystems%20Open%20Exchange
-00b2a9.svg)](https://openexchange.intersystems.com/package/csvgen)
```

In the URL place the path to your OEX page.

Thanks to [the participants of contest](#) for such a neat shield)

What other helpful Github shields do you know? Please share in the comments?
