Convert HL7 date with and without hours part

Hello,

We would need some help, please;

We would like to handle when we have a date with hours:

20201204090000

And when we have it without the hours part, as follows:

20201204

For the first case we used:

```
##class(Ens.Util.Time).ConvertDateTime(source.{ORCgrp(1).RXA:DateTimeStartofAdministratio}, "%Y%m%d%H%M%S", "%d/%m/%Y", ,.tSC)
```

For the second one we wrote:

```
##class(Ens.Util.Time).ConvertDateTime(source.{ORCgrp(1).RXA:DateTimeStartofAdministratio}, "%Y%m%d", "%d/%m/%Y", ,.tSC)
```

However each way only works for one case

How could we handle both cases with just a line of code?

We have read:

<https://docs.intersystems.com/irislatest/csp/documatic/%25CSP.Documatic....>

Thanks for your help
