

Question

[yeung elijah](#) · Jan 27, 2021

How use column (autoincrement)

How use column (autoincrement)?

```
Class samples.Account Extends %Persistent [ SqlTableName = sys_account ]
{
    // How Auto-Increment?
    Property id As %BigInt;

    Property age As %SmallInt;

    Property name As %String [ Required ];

    // Index to id
    Index indexToId On id [ Unique ];
}
```

The screenshot shows the DBeaver 7.3.3 interface with the 'sys_account' table selected. The table structure is as follows:

ID1	age	id	name
1	65	[NULL]	testPerson
2	50	[NULL]	testPerson2

Red arrows point to the 'ID1' and 'id' columns with the following annotations:

- 'What is ID1?' points to the 'ID1' column.
- 'How Auto-Increment?' points to the 'id' column.
