How can I locate the parameter that caused ERROR #6301

Hi !

There is a BusinessService be called by several callers, but now I get this error below on Event Log page:

<Ens>ErrGeneral: Failed to create document from string:

ERROR #6301: SAX XML Parser Error: processing instruction cannot start with 'xml'
while processing Anonymous Stream at line 1 offset 106

What may be the cause of this error ?

How can I locate the parameter that caused this error?
