How do I pull a class from a connected IRIS server to my local machine using VSCode for editing?

Hi -

I know this is very "newby" of me, but here goes..

I have moved some classes onto my server, but these have never been in VSCode as edited files, and I'm just not finding the magic command or button or drop-down that says "pull this file from the server and make me a local copy to edit. I can see the class files on the server using the ObjectScript plugin - but I just can't find out where to make a local copy for editing

Thanks

#VSCode
Product version: IRIS 2019.4
$ZV: IRIS for UNIX (Ubuntu Server LTS for x86-64 Containers) 2019.4 (Build 379U) Mon Oct 21 2019 16:16:39 EDT
