$$$RESTRICT in Data Connector

Following instructions on this page https://docs.intersystems.com/latest/csp/docbook/Doc.View.cls?KEY=D2IMP...
I am trying to create a Data Connector to be used as a base class for a cube with update support.
That page suggests that putting an SQL query inside XData block is not suitable for a Data Connector that supports updates.
Later it also suggests that to enable updates your SQL query must include

```
WHERE $$$RESTRICT
```

Providing an example of it in XData block example like this

```
<sql>SELECT A,B,C FROM MyApp.MyTable WHERE $$$RESTRICT</sql>
```

Which I already have a problem with, because earlier in that section it said *You cannot use this technique* (regarding defining an SQL query inside XData block) *if the data connector must support detail listings or updates. In such cases, instead see "Defining the Query at Runtime," later in this chapter.*

However, the real problem for me is the use of $$$RESTRICT within string literal of an SQL query used for OnGetSourceResultSet. What would be a proper syntax here?
