Natural Key with Generated Field and Hibernate

Consider a Natural Key with an Identity (Serial) field.

I cannot seem to acquire the generated value after persisting my entity. That is, the returned entity by Spring Data's "save" does not have the generated value.

The value is generated by the database, and I can query it after `repository.save(entity)`.

I have done some testing and created a Github repo with it...

<https://github.com/jesjobom/iris-hibernate-key-test>

Am I missing something?
