## Unable to update or set property value using sql query

I have one block of code that not working as it was supposed to in in SQL. I am using it in a routine

```
&sql(update XX .X set LocalEnvironment=1 where %ConfigName IN('XXX' , 'YYY' ))
```

using the above SQL query I am trying to set a property(LocalEnvironment) which is defined as boolean. But the query is not enabling the property. FYI- We have extended businessprocess class to create a new property.
