HttpRequest POST file Upload multipart

HttpRequest POST file Upload multipart

1. is there a code example step-by-step, how to build each part ?

I tried the demo from intersystems doc's,

I checked it in .Net response, that didnot recognize the File-data part

2. I noticed, there is :

```
SET BinaryMIMEPart.ContentType="application/octet-stream"
```

but missing :

```
SET BinaryMIMEPart.ContentDisposition (as analogue, let say for VBA EXCEL )
```

or I do it via the:

```
Do BinaryMIMEPart.SetHeader("Content-Disposition",...) ?
```

that is not analouge for VBA

need any code example link, to execute correctly all the multipart (cache call it MIMEtype)

settings
