VS Code export MAC files

Currently in Visual Studio Code when we connect to a Cache server and export the CLS and MAC files, they get placed in the following:

```
/Comp;anyName /src /Packages
```

Where the Packages folder corresponds to the different class packages we have. The MAC files are placed in the src folder and not contained in it's own folder.

Is there a way to configure the export for the MAC files so that it's contained in it's own folder like this:

```
/CompanyName /src /mac
```

Thanks in advance for your help.

-Roberto
