Using HTTP.OutboundAdapter to send Page

I am trying to figure out how to send a Page via a HTTP.OutboundAdapter to a URL from Ensemble.

We have a URL that I am able to pass PNo=xxxx%PMsg=xxxx as parameters to send the page to a pager.

<http://xxxxx.xxxxx.xxx/Employee/Tools/Paging/SendPage.aspx?PNo=1817&PMsg...>

When I send the above URL through a REST client I receive a Response of "SENT".

But when I try to send it through the HTTP.OutboundAdapter I do not get a response

```
Method Sample(pReq As osuwmc.Page.DataStructures.Page, Output
pResp As %Net.HttpResponse) As %Status
{
    set pInput = "PNo=" _pReq.PagerNumber _"&PMsg=" _pReq.Message
    set tSC = ..Adapter.Post(.tResponse,,pInput)
    if ('tSC)
    {
        $$$LOGERROR(tSC)
    }
    quit tSC
}
```

When I call ..Adapter.Post(.tResponse,,pInput) am I to assume that .pInput is putting

the data into the body of the message and not appending it to the URL?

How can I input parameters to be added to the end of the URL that is being passed in the settings of the Operation?

Thanks

Scott
