## How to use lookup function ignoring first 4 chars and do the match

Hi

I am using below function and it works fine but i want to match the value ignoring the first 4 chars as they are only added to sort the data.

```
##class(Ens.Rule.FunctionSet).Lookup
```

For example

My table has following values

0001EMRNameB

0002EMRNameA

0003EMRNameC

w ^Ens.LookupTable("EMRName","0002EMRNameA") this works

But i want to use something like that

w ^(Ens.LookupTable("EMRName","%EMRNameA") this doesnt works
