## A few questions on IKO and IAM

Hi \*,

I am new to IRIS, IKO and IAM. I have read through a lot of the documentation, but I need clarity on some things that I can't find in the documentation.

- Which Load Balancer does IKO use on the ingress? Can it be set to use another one? e.g. nginx-kubernetes + GCP LoadBalancer?
- On a multi-compute and multi-data instances deployment, how do you get to the Management Portal of each instance? i.e. The load balancer is the only point of entry into the cluster exposing 1972 and 52773, so how do I route to the individual instances?
- If using IAM, will this be on a VM running in a container outside the cluster?

Thank you in advance.

Stefan
