Is there a recommended way to search if a port is used in each Instance / Namespace?

Hello,

Thanks for your time,

We would like to know if there is a recommended way to look for if a service has a port in use in each Instance's / Namespace's Production?

We ask because of currently if we need to look if a port is used, we check in Studio every Namespace (there are more than 5) and every Instance (there are four)

#Studio #Ensemble
