How i can process a JSON

Hi!

I am making a request to an API and JSON is coming as follows:

```
SET %httprequest = ##class(%Net.HttpRequest).%New()
DO %httprequest.Get(URL)
SET %responseBody = %httprequest.HttpResponse.Data.Read()
```

```
W %responseBody
{produto:"CHP0001",Local:{IDMV: "0000000001",LOTE: "",DtFabric: "null",DtVenc: "null",Atributo06:
"00000000002",Atributo07: "",QtdeDisp: "10.00000",QtdeAloc: "0.00000",QtdeSep: "0.00000",QtdeTotal:
"10.00000",Status: "OK",Motivo: ""}}
```

```
ZW %responseBody
%responseBody="{produto:""CHP0001"",Local:{IDMV: ""0000000001"",LOTE: "",DtFabric: ""null"",DtVenc:
""null"",Atributo06: ""00000000002"",Atributo07: "",QtdeDisp: ""10.00000"",QtdeAloc: ""0.00000"",QtdeSep:
""0.00000"",QtdeTotal: ""10.00000"",Status: ""OK"",Motivo: ""}}"
```

and I'm trying to create a dynamic object:

```
SET obj = ##class(%DynamicAbstractObject).%FromJSON(%responseBody)
```

but an error happens:

```
<THROW>%FromJSON+37^%Library.DynamicAbstractObject.1 *%Exception.General Parsing error 3 Line 1
Offset 2
```

I tried to include double quotes in the keys using \$ TR, I even tried to use charset, but without success! I tried to include double quotes in the keys using \$ TR, I even tried to use charset, but without success!

can anybody help me? 😞
