Hierarchical Queries

Hi community,

I need to write an SQL query with hierarchical order, I have a table with a column referencing itself, similar as the sample bellow:

ID	DATE	MESSAGE	LOGIN	PARENTID
	1700.01	Bacon ipsum dolor amet pork shoulder ribs	user1	
	1700.01	Gouda croque monsieur emmental.	user2	
	1700.01	Manchego fromage frais airedale	user3	

Oracle database has Hierarchical Query, to do something like that:

```
SELECT id, MESSAGE, parent_id
   FROM messages
   CONNECT BY PRIOR id = parent_id;
```

Is it possible to do something like that in Caché?

Thanks in advance

#Caché
Product version: Caché 2018.1
$ZV: Cache for UNIX (Oracle Solaris for SPARC-64) 2018.1.3 (Build 414_020009) Wed Jun 17 2020 12:17:10 EDT
