New Video: Connecting Devices to InterSystems IRIS for Health

Hi Community!

Enjoy watching the new video on [InterSystems Developers YouTube](#):

[Overview: Connecting Devices to InterSystems IRIS for Health](#)

InterSystems IRIS for Health can receive device data in multiple formats based on different communication standards. It then transforms this data — applying decision logic and even machine learning predictions — before sending messages to the appropriate applications and people. Developers can use the programming language and messaging protocols best suited for each task while interfacing with a single application.

Personal fitness trackers, smart assistants, and medical-grade monitoring devices are all able to connect to InterSystems IRIS for Health, allowing healthcare providers to make informed decisions that keep patients healthy and out of the hospital.

Subscribe to [InterSystems Developers YouTube](#).

Enjoy and stay tuned!
