Jobs on Developer Community

Hi Developers!

As you may know, InterSystems Developer Community can help you to find a job. There are two options for developers: find a job for yourself or hire staff for your company. Just post an ad on the InterSystems Developer Community and find what you are looking for!

How does it work? Check the details below:

The "Jobs" section available in the top menu here:

What can be found in this section?

- Job opportunities:

Job opportunity announcements on any position which demands any of InterSystems technology skills.

- Job wanted:

Announcements of specialists in InterSystems Data Platforms who are looking for a job. The list of skills should contain any of InterSystems technologies.

So, if you:

- want to offer a position that demands any of InterSystems technology skills OR

- have experience with InterSystems technology and are looking for a new job,

you can both publish a post in the Developer Community. You just have to **add related tags** to your announcements:

- [Job opportunity](#)
- [Job wanted](#)

And here's the easiest way to create a job opportunity:

Go to the [Jobs section](#) and click on the **"New job opportunity" button**, an ad will be automatically created with a special "Job opportunity" tag. This tag will make a vacancy out of your announcement and add it to this section.

So!

You will be able to find new employees or a new job in a quick and easy way with InterSystems Developer Community!

If you have any questions or need some help with the post, don't hesitate to contact us!

Precautionary measures:
