How to get the row number in an SQL query?

Hi,

I'm doing a query in SQL and I need to sort my data by some non-repeated field.

Unfortunately, my data is grouped in a way that I cannot guarantee that any column will not have repeated data, so one solution would be to take the row number.

Also, the Cache is not accepting RowNumber () in my query and I would like to know if there is another solution to return line numbers or some way to add this function to the Cache.

Best regards.
