Complex Mapping with Variable Leading Data

My dilemma is that I'm working with a file that has three different data records plus the header and trailer. The record type is in positions 21-23. The header and trailer have spaces in positions 1-20. The data records have a variable data in positions 1-20.

I tried to use pattern matching in the leading data field however that field is treated as a literal string for matching.

Header Row		000
Data Row 001	139459911	001
Data Row 002	139459911	002
Data Row 003	139459911	003
Data Row 001	139459044	001
Data Row 002	139459044	002
Data Row 003	139459044	003
Trailer Row		999

Does anyone have any thoughts?
