## Posting a FHIR Bundle to Resource Repository

I am attempting to POST a Bundle containing a resource to an ISC-based Resource Repository. [Documentation](#) says "batch" interaction is fully supported - so I assume this is possible.

I post to the FHIR base URL, but I get the following back: " The requested URL /customfhir/r4 was not found on this server."

The bundle I use to post to create a patient resource is very simple (see below). I am using a request.method of POST because I want the Resource Repo to create a new fhir resource id.

I'm using Postman to generate the request. Other than this, I am able to successfully create, search, and read resources from the Resource Repo.

Has anyone tried this, and/or know if this is supported?

Here is the json request payload:

```
{
  "resourceType": "Bundle",
  "type": "transaction",
  "entry": [
    {
      "request": {
        "method": "POST",
        "url": "Patient"
      },
      "resource": {
        "resourceType": "Patient",
        "id": "deb73381811",
        "text": {
          "status": "generated",
          "div": "
Some narrative
"
```

```

      },
      "active": true,
      "name": [
        {
          "use": "official",
          "family": "Wade",
          "given": [
            "Dwyane",
            "James"
          ]
        }
      ],
      "gender": "male",
      "birthDate": "1974-12-25"
    }
  ]
}
```

```
]
}
```
