Accessing another process's object variables properties like %session and %request.

Hi Community,

I am trying to access another process's content of objects like %request and %session. I am using the class/method "%SYS.ProcessQuery:VariableByPid". Does anyone knows how to get the value of the properties like %request.Data("ID",1) from one process that is running on the DB server?

Example of what I am trying to do:

```
set rs=##class(%ResultSet).%New("%SYS.ProcessQuery:VariableByPid")
set tsc=rs.Execute(ProcessID,"%request")
while rs.%Next() {
w "Name:"$g(rs.Data("Name")),!
w "Value:"$g(rs.Data("Value")),!
}
do rs.Close()
```

Output:

Name:%request
Value:1 @%CSP.Request

I just can see the object reference 1 @%CSP.Request, I am not sure if we have a way to check the object properties.

Kind Regards,

Daniel
