gj :: connect

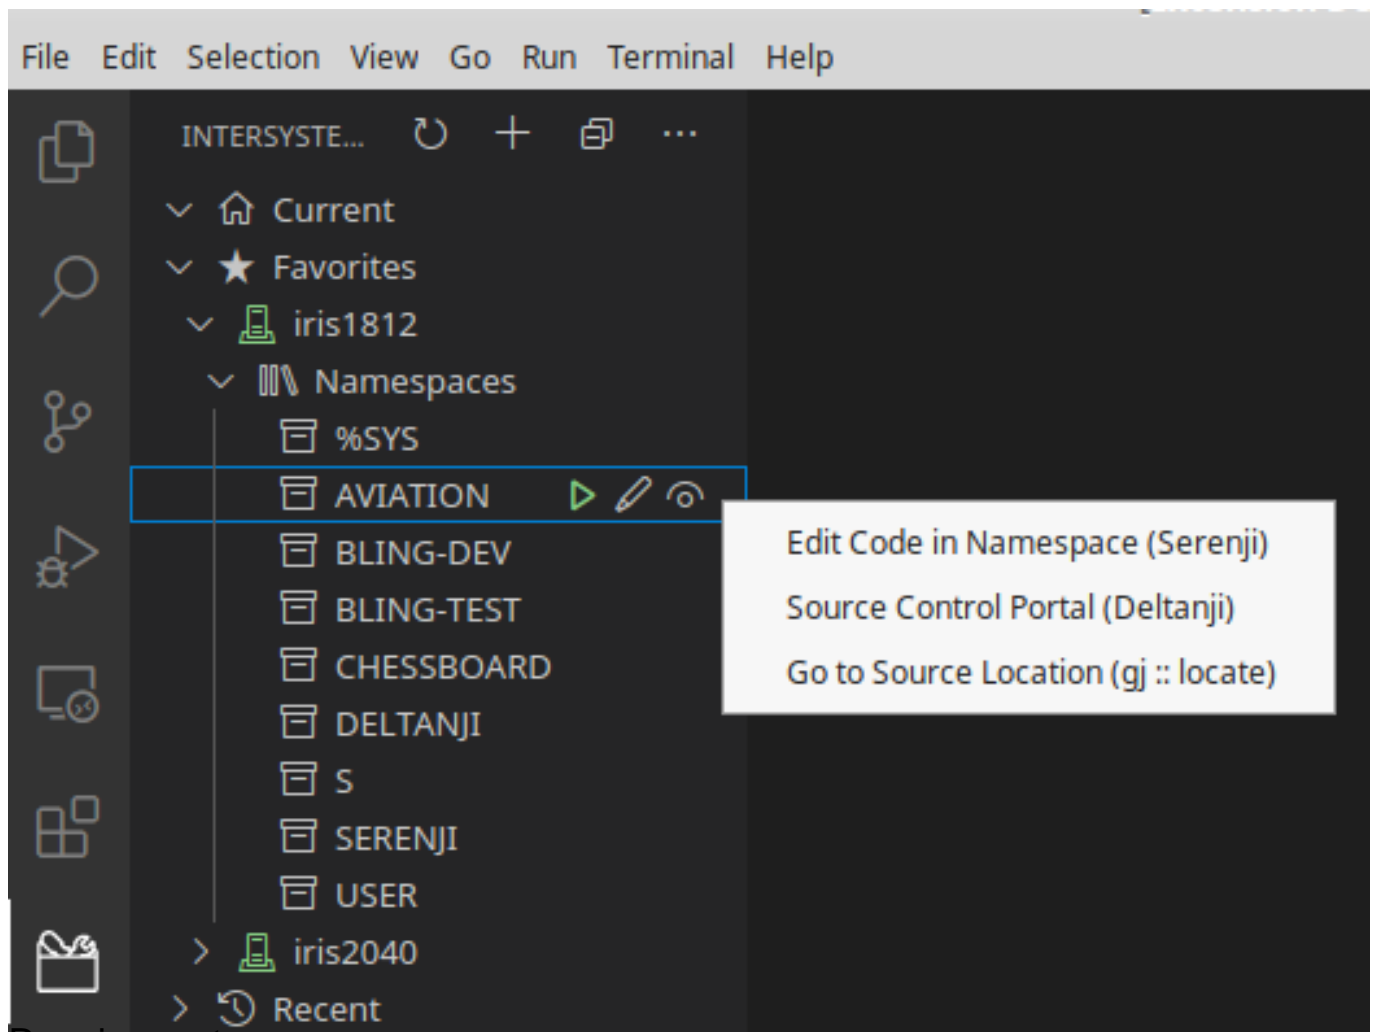

gj :: connect is a demonstration extension that shows how to extend the InterSystems Server Manager to perform custom actions.

It makes use of the context menu contribution points to add both in-line and right click menu options.

It also demonstrates how to create a new top level folder in your workspace corresponding to the server and namespace selected in Server Manager.

Features

- Add in-line command to each namespace folder
- Add right-click context menu to each namespace folder
- Demonstrates use of `getServerSpec` api to read and use connection properties
- Demonstrates how to launch a url in an external browser
- Demonstrates how to add a top level folder to the workspace (if not already present)

Requirements

gj :: connect

Published on InterSystems Developer Community (<https://community.intersystems.com>)

This extension requires the InterSystems Server Manager extension to be installed, and will install it automatically if it is not.
