Sort alphabetically a list of names

Hello everyone,

I don't want to believe that InterSystems didn't add a method/process/rule to sort alphabetically a list of names (in array, \$LB or whatever)

I haven't found any documentation about this. I've even tried comparing two strings but have not found a solution.

My cry for help is...

Does exists any command to compare two strings and check if one of them is lower or upper according to alphabet?

Please, give me a light in this dark

Best regards.

Kurro Lopez
