Keep session Cookie in SOAP

Hello,

I have a question about a problem calling a SOAP Web Service.

Indeed, to retrieve data via a Web Service, I need to make 4 calls, one to connect, one to place parameters, one to retrieve data and one to disconnect. Using the EnsLib.SOAP.OutboundAdapter class, I manage to make my first connection call but for the other calls I would need to keep my session cookie otherwise it doesn't consider me as connected. I know it's possible to do this in REST directly in the EnsLib.REST.OutboundAdapter class but I can't find a way to do it in SOAP.

Has anyone already encountered the same problem as me?

Thanks in advance for your feedback
