TSTART Connection lost and transaction does not rollback

Hello,

I have a quick question regarding TSTART, however not certain if there is an answer.

If I am inside the transaction and I loose connection - I always assumed that transaction would TROLLBACK, however it does not.

Is there anything special I need to set up with my TSTART, in order for this transaction to safely rollback?

****

As example: Let's say I am inside the TSTART and setting up / altering some data and my VPN connection got disconnected. I kind of expect all the data to be rolled back.

Thank you,

Alex
