How parse Library.ListOfObjects to JSON

Hello! I have a question how to parse Library.ListOfObjects to JSON

I send post data like this from client using rest and want parse "templates", after save "codeForm", "codeName" in database

```
{
  "whoIs": "",
  "templates": [{
    "codeForm": "FORM_FIOGROUP",
    "codeName": "operationDate",
    "orderNumber": "1",
    "codeFormat": "YYYY-MM-DD",
    "header": "DATE",
    "dbfFormatType": "Date",
    "dbfFormatLength": "8",
    "valueFrom": "Payment"
  }, {
    "codeForm": "FORM_FIOGROUP",
    "codeName": "rrn",
    "orderNumber": "2",
    "codeFormat": "String",
    "header": "REFERENCE",
    "dbfFormatType": "String",
    "dbfFormatLength": "25",
    "valueFrom": "Payment"
  }
  ]
}
```

I use this way, but it doesn't work:

```
set content = %request.Content

set iter = content.templates.$getIterator()

while iter.$getNext(.key, .value) {
w value
}
```
