Is it possible to use Table Value Constructors outside of INSERT/UPDATE statements?

I need to show the absence of data, so I have to join the list of predefined values with a result of a select statement. However, it seems like Table Value Constructors in JOIN are either not supported, or I do not understand the syntax.

Basically, I am going for something like this:

```
Select v.valueId, m.name
  From (values (1), (2), (3), (4), (5)) v(valueId)
      left Join otherTable m
          on m.id = v.valueId
```

Is it supported in Cache SQL or not?
