## ##class(%ZEN.Auxiliary.jsonProvider).%ObjectToJSON() don't show %DynamicObject items

Hello everyone,

I created a Class with this 3 properties

```
Class TestDynamic Extends (%RegisteredObject, %XML.Adaptor)
{
    Property number As %xsd.string;
    Property exam As %xsd.string;
    Property result As list Of %DynamicObject;
}
```

I'm adding objects to list normally

```
set objTest=##class(TestDynamic).%New()
set objDynamic={"field":"value"}
do objTest.result.Insert(objDynamic)
```

But when i use this method to convert to JSON

```
##class(%ZEN.Auxiliary.jsonProvider).%ObjectToJSON(objTest,,,"aeoqtw")
```

It doesn't show the items from %DynamicObject just show this:

```
{
  "number": "",
  "exam": "",
  "result": [
    "21@%Library.DynamicObject"
  ]
}
```

Cheers.
