## handling multiple Json objects through HttpResponseMessage data

`pResponse.%JSONImport(tHttpResponse.Data)` failing when we have multiple (array) json objects in response.

```
set patientSearchList = ##class(msg..patient.PatientSearchList).%New()
```

```
s rListObj={}
```

```
d rListObj.%Set(ListViewName,[],.%FromJSON(tHttpResponse.Data))
```

```
do pResponse.%JSONImport(rListObj)
```

What's the better way to handle multiple json objects coming in response.
