Meet Djeniffer Greffin – New Developer Community Moderator!

Hi Developers,

We're pleased to welcome [@Djeniffer Greffin](#) as our new Moderator in the Developer Community Team!

Let's greet Djeniffer Greffin with big applause and take a closer look at her bio!

Djeniffer works as a DBA Consulting at [Sabin Medicina Diagnóstica](#).

And here're some words from [@Djeniffer Greffin](#):

- I have been working with InterSystems technology since 2009, my first contact with the technology was in a system migration originally written in MUMPS for a WEB system developed in ZEN, using classes and global mapping.
- In 2012, I went to a healthcare development company more specifically in laboratories, with a LIS(Laboratory Information System) product. Here was where I started to work more strongly with interoperability in the healthcare industry. Was at this point, I started to specialize more and started to not only develop, but also to act in the performance of applications and in the tuning of operating systems.
- In 2018 I was invited by one of our customers to be part of the team responsible for the company's core environment. In this client, I specialized in creating interoperability between laboratory devices. I have deep knowledge of communication standards in healthcare.
- Today I work strongly in the design, implementation, and security of technological solutions within the laboratory.

So, let's warm welcome our new DC Moderator!

Thank you and congratulations, [@Djeniffer Greffin](#)! Hope our Community will grow with your help!
