# Control Production Start / Stop to specific roles, affecting Ensemble Hosts restarting

Hi Team,

I have a requirement to disable the Production Start/Stop buttons for specific support users. But they should be able to start/stop Ensemble Hosts.

For that new Role, As per documentation along with other Ens resources, I have added %Ens\_ConfigItemRun with RWU access and didn't add %Ens\_ProductionRun resource.

This makes the Start/Stop buttons disappear from the Production Configuration page (meeting my requirement). But those users are unable to start/stop/restart Ensemble Business Hosts.

When they try to start, it's not showing any Production Update progress popup page and also no jobs are showing in the Jobs tab and no logs in the Logs tab, but only green color appears before the host (after clicking refresh button) which is giving false hope.

But, if I add %Ens\_ProductionRun to that role, Ensemble host restarting works fine, but that also enables start/stop of production, which is not meeting my requirement.

Does both these resources are related and cause of my issue? (%Ens\_ProductionRun, %Ens\_ConfigItemRun)

Please suggest, how do I achieve my requirement?

"Disable the Production Start/Stop buttons for specific support users/roles. But they should be able to start/stop Ensemble Hosts."
