Business process pointing to operation, can't discover the reason why

Hello,

I'm quite new at InterSystems. I have a business process that's pointing two different business operations, but one of them I don't want it to point to.

I went through the FileSystem settings, data transformations, classes, and code to see what it could be, but I don't see why its connecting to this second operation.

What other inner-system mechanics would I need to consider? What have might I have missed?
