Can OAuth client configurations be exported/copied from one instance to another?

Hi all,

I'm performing a migration of some services from one instance to another, and I noticed that the technique defined within the InterSystems Server Migration Guide does not include OAuth client configurations. The recommended technique is to use the ##class(Security.System).ExportAll() and ##class(Security.System).ImportAll() methods.

Is there a way to migrate OAuth client configurations, or do those have to be re-created manually?
