## How to remove a business host programmatically from a running production?

Hi guys,

How can we remove a business host from a running production?

I've read and tested [how to add it to a production](#), while when I try to remove it from the production with the following codes:

```
Set tSC = $$$OK
Set prodName = "CDRDemo.DemoProduction"
Set confName = "TEST1"
Set className = "Demo.LISClient.Operation.PatientOperation"
#Dim prodConf As Ens.Config.Production = ##class(Ens.Config.Production).%OpenId(p
rodName)
Set itemId = ""
&SQL(Select ID into :itemId from Ens_Config.Item
    where Production=:prodName
    and ClassName=:className
    and Name=:confName)
Set confItem = ##Class(Ens.Config.Item).%OpenId(itemId)
Do prodConf.RemoveItem(confItem)
Set tSC = ##class(Ens.Director).UpdateProduction()
Quit:$$$ISERR(tSC) tSC
Quit tSC
```

The execution is successful, but when I then visit the production page, it shows:

localhost:52774 顯示

An error has occurred on the server:

ERROR #5001: Data inconsistency detected - Production items  
not found, may require recompilation

SOURCE ELEMENT: %ZEN.Auxiliary.jsonProvider (productionInfo)

Also, the business host reference is still in production class, then how may I remove it programmatically and keep the production running?
