Is there something like InstallBusDemo for HealthShare 2021.1?

(2021.1.0 isn't an option in the Product dropdown, but that's the version of HS I'm asking about!)

In the past I've used `HS.Util.Installer.InstallBusDemo()` to set up a local HealthShare environment (registry, edges, access gateway, etc.) I don't see an equivalent in HealthShare 2021.1. I tried importing the bits and pieces from a lower version but always seem to be missing something. Is there an equivalent utility to do a local setup in HS 2021.1?

Thanks,

Lori
