Serenji v3.1.4 update

We've published an update to the Serenji debug extension for Visual Studio Code, making it ready for the Workspace Trust feature in VS Code 1.57.

This allows the Serenji ObjectScript editor to work without restrictions across all workspaces and, by bringing it in line with the VS Code update, only allows the debugging feature to be used in trusted workspaces.

If you're already a user then Serenji will automatically update. If you would like to try our editor and debugger then you can find it in the VS Code [marketplace](#).
