## Getting Users ip and location

My requirement is to get the website visitors IP address and location. I tried an external API . Always it's returning server IP and location not visitors IP.

```
set req=##class(%Net.HttpRequest).%New()  
set req.Server="api.ipstack.com"  
set req.ContentType="application/json"  
set sc=req.Get("/check?accesskey= key here" )  
set data=req.HttpResponse.Data
```

Write data.Read(30000)

Can someone help me to resolve this issue? or any in-build method is there in Iris to get the IP.

Have to create a production operation and service for this?
